

RARE BIRD ALERT! This Cessna 150D is a Factory built Cessna Patroller produced for Barr Air Patrol back in 1963, until now you've likely seen aftermarket look-alikes.

This aircraft has the best options: Rear Windows, Manual Flaps, Straight Tail, Long Range Tanks (6.5hr+ endurance no prob), Factory Patroller Doors - See OG WB sheet! I fly it to the east coast and back to Colorado regularly between 085 & 105. o-200, 900 SMOH, Airframe TT 10,000, never a trainer. IFR pitot static, Garmin GPS 400, AV-30 HSI, ILS via Terra TXN960 LED lights throughout. Sold with Garmin Aera 660 /GDL 50/ yoke mount, Ipad Mini and Ram Mount.

I have made light upgrades to this airplane over time to accomodate time building and safe long distance travel, Its a great east coast machine, I fly to most destinations on the east coast within one tank of fuel (35gl). IFR pitot static is great for Ascending / descending through cloud decks if needed. Please contact me for my photo/video link. Call with any questions.

Concord Battery for Cold Wx performance

New Battery / Generator Iso Switch
